George Borjas well received text blends coverage of traditional topics with modern theory and developments into a superb labor economics book. His integration of theory with facts and coverage of latest research make his book one of the most popular at the middle and upper end of the market.

Poverty is a pressing and persistent problem while its extent varies across countries. Its presence always represents the diminution of human capacity; therefore it seems natural to want to do something about it. Have countries made progress in mitigating poverty? How do we determine who is poor and who is not poor? What intuitions or theories guide the design of anti-poverty policy? Is overall labor market performance the key to keeping the poverty rate low, or does it matter how well connected an individual is to those who know about the availability of jobs? Does being an immigrant increase the odds of being poor? Are there anti-poverty policies that work for whom? Do they work if I'm poor? Will I have access to health care and housing? Am I more likely to be obese, polluted upon, incarcerated, unbanked, and without assets if I'm poor? Is poverty too hard a problem for economic analysis? These are some of the questions that a distinguished group of scholars have come together to confront in this handbook. The handbook is written in a highly accessible style that encourages the reader to think critically about poverty. Theories are presented in a rigorous but not overly technical way. Concise and straightforward empirical analyses enlighten key policy issues. The volume has six parts: poverty in the 21st century, labor market factors, poverty policy, poverty dynamics, dimensions of poverty, and trends and issues in anti-poverty policy. A goal of the handbook is to stimulate further research on poverty. To that end, several chapters challenge conventional thinking about poverty and in some cases present specific proposals for the reform of economic and social policy.

This 1997 edition of OECD's Periodic Survey of the US Economy examines recent economic developments, policies, and prospects. It includes special features on immigration and entrepreneurship.

recent influential empirical work has emphasized the negative impact immigrants have on the wages of u s born workers arguing that immigration harms less educated american workers in particular and all u s born workers in general because u s and foreign born workers belong to different skill groups that are imperfectly substitutable one needs to articulate a production function that aggregates different types of labor and accounts for complementarity and substitution effects in order to calculate the various effects of immigrant labor on u s born labor we introduce such a production function making the crucial assumption that u s and foreign born workers with similar education and experience levels may nevertheless be imperfectly substitutable and allowing for endogenous capital accumulation this function successfully accounts for the negative impact of the relative skill levels of immigrants on the relative wages of u s workers however contrary to the findings of previous literature overall immigration generates a large positive effect on the average wages of u s born workers we show evidence of this positive effect by estimating the impact of immigration on both average wages and housing values across u s metropolitan areas 1970 2000 we also reproduce this positive effect by simulating the behavior of average wages and housing prices in an open city economy with optimizing u s born agents who respond to an inflow of foreign born workers of the size and composition comparable to the immigration of the 1990s national bureau of economic research web site

i examine the determinants of inter state migration of adults within western germany using the german socio economic panel from 1984 2000 i highlight the prevalence and distinctive characteristics of migrants who do not change employers same employer migrants represent one fifth of all migrants higher education and pre move wages than non migrants conditional on age same employer migrants are therefore more skilled than non migrants by contrast although other migrants have higher education than non migrants they do not have higher pre move wages furthermore they have in their ranks disproportionate numbers of the non employed unemployed and recently laid off it therefore seems inappropriate to characterize

them as more skilled than non migrants the results for same employer migrants indicate that skilled workers have a low cost migration avenue that has not been considered in the previous literature i also analyze the relation between repeat and return migration and distinguish between short and long distance migration i confirm that long distance migrants are more skilled than short distance migrants as predicted by theory and i show that return migrants are a mix of successes and failures
